

Ideation Phase

Empathize & Discover (Empathy Map Canvas)

Date:	21 July 2026
Name	ABINAYA P
Project Name:	Automated Network Request Management System
Maximum Marks:	4 Marks

User Persona: Enterprise Employee / Corporate Requester

Who are they?

An employee requesting a new network connection, additional hardware, or relocation of existing network equipment.

What do they SAY?

- "I need a simple online form to submit my request."
- "Why do I have to enter my details every time?"
- "I want to know the status of my request."
- "I need my network setup completed before my office move."

What do they DO?

- Search for request procedures on the company portal.
- Submit requests with missing or incorrect information.
- Manually enter location and device details.
- Frequently follow up with IT for status updates.

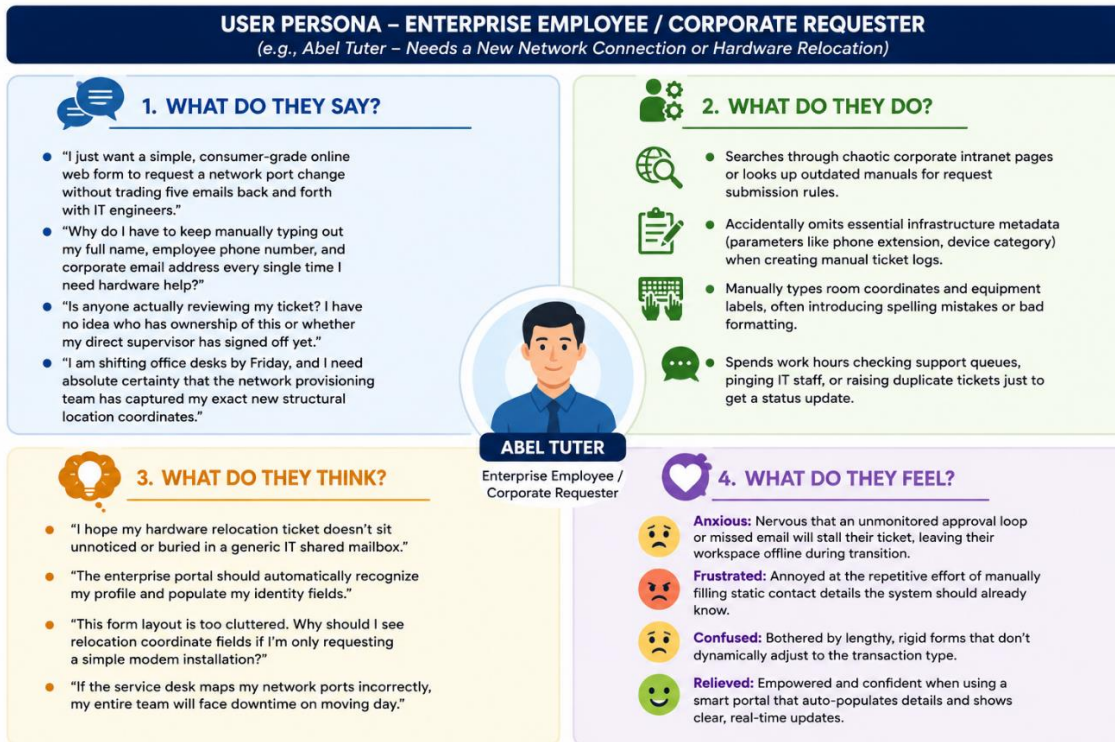

What do they THINK?

- "I hope my request doesn't get delayed."
- "The portal should auto-fill my profile details."
- "The form should only display relevant fields."
- "Accurate network setup is essential for my work."

What do they FEEL?

- **Anxious** about delays in approvals.
- **Frustrated** by repetitive manual data entry.

- **Confused** by lengthy and complex forms.
- **Satisfied** when using an automated, user-friendly portal with real-time status updates.

Summary of Pains & Gains (Canvas Takeaways)

Pains

- Complex and static request forms lead to incomplete or incorrect submissions.
- Limited visibility into request status after submission.
- Manual approval processes cause delays and slow service delivery.

Gains

- A user-friendly, centralized Service Portal for network requests.
- Dynamic UI policies that display only relevant fields based on the request type.
- Automated approval workflow with direct storage of approved requests in the **u_network_database** for accurate and efficient record management.
