

Project Design Phase

Problem – Solution Fit Template

Date	21 July 2026
Name:	ABINAYA P
Project Name:	Automated Network Request Management System
Maximum Marks:	2 Marks

1. Visual Artifact: Problem–Solution Fit Canvas

The **Problem–Solution Fit Canvas** illustrates how the identified user challenges are addressed through the proposed ServiceNow solution. It highlights the relationship between key pain points and the corresponding automated features designed to improve efficiency, accuracy, and the overall user experience.

2. Detailed Quadrant Write-up

1. Customer Segment (CS)

Enterprise employees who require new network connections, hardware provisioning, or workplace relocation support.

2. Customer Behavior (CB)

Users search internal resources, manually complete request forms, and frequently contact IT teams to check request status.

3. Unfavorable Situations (US)

Lack of request visibility, manual approvals, and delayed provisioning disrupt employee productivity during workspace transitions.

4. Hard-to-Do Tasks / Problems (HP)

Entering detailed hardware and location information manually and identifying the correct support team for assistance.

5. Root Cause (RC)

The existing system lacks mandatory validation, dynamic forms, automated approval workflows, and integration with employee profile data.

6. Behaviors (B)

Users submit duplicate requests or repeatedly contact the IT support team for updates due to uncertainty.

7. Triggers (TR)

Office relocations, new employee onboarding, department transfers, and network infrastructure changes.

8. Your Solution (YS)

A ServiceNow Service Portal Catalog with auto-populated user details, dynamic UI policies, mandatory validations, Flow Designer approvals, and automatic storage of approved requests in the `u_network_database`.

9. Channel & Message (CM)

Channel: Employee Service Portal

Message: "Submit network requests quickly with automated approvals and real-time status tracking."

10. Emotional Driver / Impact (ED)

The solution reduces manual effort, improves transparency, minimizes delays, and provides a smooth, reliable experience for employees.
